No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Description

Immunogenic compsn. for producing anti-human gastrin 17 antibodies - used for treating e.g. gastro-oesophageal reflux disease, gastric and duodenal
                                                                                                                                                                            treating gastrointestinal malignancy, and non-gastrointestinal tumors such as thyroid and lung cancer; or GnRH or hGG immunominic peptide is useful as contraceptive and for treating cancers in male and female reproductive systems. The present sequence comprises a G17 peptide linked to a spacer peptide at the C-terminal end.
                The present invention relates to injectable liposomal compositions (I) for delivery of a water-soluble substance e.g. immunomimic peptides. (I) for delivery of a water-soluble substance e.g. immunomimic peptides. (I) lipid to an encapsulated water-soluble substance so as to achieve a high lipid to an encapsulation. The immunomimic peptide is chosen from gastrin G-17 (ADH89210 to ADH8921), gonadouropin releasing hormone (GARH) peptide (ADH89210 ADH89219), gonadouropin releasing hormone (GARH) peptide (ADH89220 and ADH89222 and ADH89225). (I) comprising vaccines directed against hormone or hormone cognate receptors, where the vaccine comprises at least one:
                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human gastrin 17; antigenic peptide hG17(1-9)-Ser9; immunisation;
treatment; gastro-oesophageal reflux disease; gastric; duodenal;
ulceration; cancer.

ö

AAR74295 and AAR74297 are human gastrin 17 (hG17) antigenic peptides, used to produce anti-hG17 antibodies (Abs). The Abs can be induced in a patient, or used for passive immunisation, for the treatment of diseases in which hG17 is involved, e.g. gastric and duodenal ulceration; gastro-oesophageal reflux disease and cancer

Sequence 16 AA

Claim 1; Page 14; 17pp; English.

```
The invention relates to the treatment of gastroesophageal reflux disease (GERD) that comprises administering to a patient an immunogenic composition which generates anti-gastrin antibodies, which bind to gastrin, in a patient; and administering histamine H 2 antagonist or a gastrin, in a patient; and administering histamine H 2 antagonist or a gastrin, purply patient; and administering histamine H 2 antagonist or a gastrin levels associated with standard therapies are neutralized and gastrin levels associated with standard therapies are neutralized and controlling acid output by the stomach. The method permits a reduced dosage confedicable side effects are reduced. The method permits a reduced dosage of acid reducing agent borh at the acid producing level as well as the coffedication stimulating level (gastrin). Reduction of dosages is acid production stimulating level (gastrin). Reduction of dosages is cell production prolong unitations, anti-gastrin 17 antibody titers complete or proton pump inhibitors, anti-gastrin 17 antibody titers can be maintained by occasional booster shots while gastric acid can be maintained by cocasional lowaster shots wile gastric acid inhibitor dosaing is reduced. Immunization allows a sufficient time for the esophagitis to completely heal and no surgery is required. The present sequence represents a human heptadecagastrin (G17) immunomimic completely and spacer

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The specification describes a method of treating a cancerous or precancerous condition of the lung, oesophagus or liver. The method involves administering to a patient an immunogen which induces antibodies in the patient against peptide hormone gastrin 17 (G17) and/or a gastrin receptor, e.g. cholecystokinin (CCK)-B. The method is useful for treating cancerous or pre-cancerous condition of lung, oesophagus or liver, where the condition is cancerous condition. The treatment prevents or delays progression of the Barrett's oesophagus to a cancerous state. The method is also useful for treating the growth of a gastrin-induced tumour or pre-cancerous lesion of the lung, liver or oesophagus. ABP73032-35 represent peptides which induce specific immune responses to G17. The peptides comprise an amino terminal fragment of G17 and a carboxy-

Immunogenic compsn. for producing anti-human gastrin 17 antibodies - used for treating e.g. gastro-oesophageal reflux disease, gastric and duodenal ulceration or cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAR74295 and AAR74297 are human gastrin 17 (hG17) antigenic peptides, used to produce anti-hG17 antibodies (Abs). The Abs can be induced in a patient, or used for passive immunisation, for the treatment of diseases in which hG17 is involved, e.g. gastric and duodenal ulceration; gastro-oesophageal reflux disease and cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gарв

The invention relates to the treatment of gastroesophageal reflux disease CC (GERD) that comprises administering to a patient an immunogenic composition which generates anti-gastrin antibodies, which bind to composition which generates anti-gastrin antibodies, which bind to gastrin, in a patient; and administering histamine H_2 antagonist or a controlling acid output by the stoomed. The therapy is less costly. High cc controlling acid output by the stoomed. The method permits a reduced dosage is associated with standard therapies are neutralized and card reducing agent both at the acid producing level as well as the cc acid reducing agent both at the acid producing level as well as the cc acid reducing agent both at the acid producing level as well as the cc acid production stimulating level (GERD. In a combination therapy with desirable for prolonged treatment of GERD. In a combination therapy with cc an be maintained by occasional booster shots while gastric acid cinhibitor dosing is reduced. Immunization allows a sufficient time for inhibitor dosing is reduced. Immunization allows a sufficient time for cinhibitor dosing is reduced. Immunization allows a sufficient sequences the esophagitis to completely heal and no surgery is required. Sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention describes a novel method for the treatment or preventing the hypergastrinemia by administering to a patient a gastrin G17 and/or G34 hypergastrinemia by administering to a patient a gastrin G17 and/or G34 peptide fragment linked by an amino acid spacer to an immunogenic carrier. The methods are used to treat hypergastrinemic patients patients particularly those with pernicious anemia, those receiving treatment with particularly those with pernicions anemia, those receiving treatment with a languages agents such as proton pump inhibitors (particularly omeprazole or lansoprazole) or H 2 receptor blocking agents or antagonists, or those having colorectal disorders or diseases. This sequence represents a human having colorectal immunogen which is used to illustrate the method of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Immunogenic; treatment; hypergastrinemia; gastrin G17; gastrin G34;
pernicious anemia; anti-ulcer; proton pump inhibitor; colorectal disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Treating or preventing hypergastrinemia comprising administration of, e.g. anti-gastrin antibodies.

The method involves administering to a patient an immunogen which induces annibodies in the patient against peptide hormone gastrin 17 (G17) and/or a gastrin receptor, e.g. cholecystokinin (CCK)-B. The method is useful for treating cancerous or pre-cancerous condition of lung, oesophagus or liver, where the condition is cancer, or Barrett's condition. The treatment prevents or delays progression of the Barrett's oesophagus to a cancerous state. The method is also useful for treating the growth of a gastrin-induced numbur or pre-cancerous lesion of the lung, liver or oesophagus ABP73032-35 represent peptides which induce specific immune responses to G17. The peptides comprise an amino terminal fragment of G17 and a carboxy-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Treating cancerous or pre-cancerous conditions of the lung, esophagus or liver, by administering an immunogen which induces antibodies in the patient against G17 and/or cholecystokinin-B/gastrin receptors.

The present invention relates to novel pharmaceutical compositions for passive immunization. The compositions comprise monoclonal antibodies for the human hormone gastrin (G17 and G34) which selectively bind and neutralize gastrin, and a pharmaceutical inert carrier. The hormone gastrin has two main functions stimulation of acid secretion and stimulation of gastrointestinal tract cell growth, and exists in two forms: heptadecagastrin (G17) and tetratriacontogastrin (G14). The compositions are useful for preventing or treating ulcers, e.g. duodenal and gastric ulcers or tumors whose growth is dependent on or stimulated by gastrin hormones. Peptides ADY37660-ADY37655 were used in an example from the invention for the induction of specific immune responses to from the human G17 and a spacer peptide.
                                                                                                                                                                                    Cytostatic, Gastrointestinal-Gen.; Antiulcer; Vaccine; pharmaceutical; hormone; gastrin; heptadecagastrin; ulcer; duodenal ulcer; stomach ulcer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New pharmaceutical composition for passive immunization comprising anti-
human gastrin G34 or anti-hunt gastrin G17 monoclonal antibodies, useful
for preventing or treating ulcers or tumors.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 12
```

```
The present invention relates to novel pharmaceutical compositions for passive immunization. The compositions comprise monoclonal antibodies for the human hormone gastrin (G17 and G34) which selectively bind and comparate the human hormone gastrin, G17 and G34) which selectively bind and neutralize gastrin, and a pharmaceutical inert carrier. The hormone gastrin has two main functions: stimulation of acid secretion and castrointestinal tract cell growth, and exists in two forms: heptadecagastrin (G17) and terrariscontogastrin (G34). The compositions are useful for preventing or treating ulcers, e.g. duodenal compositions are useful for preventing or treating ulcers, e.g. duodenal compositions are useful for present sequence is a fusion peptide comprising a fragment of human G17 and a spacer peptide. This sequence was used to demonstrate that a polymerised peptide immunogen can be constructed and used to reduce anti-G17 antibody responses. This peptide comprises a cuinque epitope for G17 (residues B and 14).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to an affinity-binding assay for selecting antigen specific immune cells. The method involves contacting particle such as a cell having four copies of target molecules with two binding molecules specific for the target molecule, where first of the binding molecules is associated with a first label and a second of the binding with each label and selecting cells staining with each label and selecting cells binding both labels. The invention also provides a method for detection of early B cell populations in vaccine development. The invention is useful for the preparation of an antibody. The present sequence is a gastrin TDK 2 peptide. This sequence is an immunogenic peptide used as a vaccine.
                                                                                                                                                                                                                                                                                                                                                                                                                              Affinity-binding assay for selecting antigen specific immune cells, by contacting cell having four copies of target molecule with two labeled binding molecules, detecting cells staining with each label, selecting cells binding both labels.

The invention relates to a pharmaceutical composition (I) comprising a comparison with native gastrin. (I) or CI is useful for relating a subject in comparison with native gastrin. (I) or CI is useful for a cutating a subject having diabetes, which involves administering CI or a cutating a subject having diabetes, which involves administering CI or a confished gastrin capable of covalently reacting with a serum protein, where the frequency of administering the gastrin compound is less than circagenery of administering the gastrin compound is less than circagenery of administering the gastrin The method further involves measuring a physiological indicator of islet neogenesis.

CC involves measuring a physiological indicator of islet neogenesis.

CC the modified gastrin comprises a sequence of native gastrin capable of comparing to the gastrin/CCK receptor and an amino terminal cysteine or binding to the gastrin for maintaining for an extended period of crime an increased gastrin serum level compared with the serum level of crime an increased gastrin serum level compared with the serum level of administering CI. (I) Contains gastrin compositions having longer active circulation than native gastrin peptides, and has a longer half-life in circulation in a subject. This sequence corresponds to amino acids 1-11 correction than half-life the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

                                                                                                                                                                                                                                                                                                                                                                                                              Antigenic fragments may be attached to an immunogenic carrier and used to raise Abs to a specific single form of Gastrin ie. G17 or G34. Peptide fragments capable of binding to these Abs are useful in neutralising anti-gastrin Abs in vivo. (Updated on 09-JAN-2003 to add missing OS field.)
                                                                                                                                                                                                                                                                                                                                                Immunogens against gastrin peptide(s) - used to induce antibodies that specifically neutralise single form of gastrin, G17 or G34.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                Antigenic peptide fragment selected from the 12 N-terminal AAs of heptadecagastrin (G17).

T. 1 RAT APBAL RAT STANDARD; PRT; 839 AA. 30-MAY-2000 (Rel. 39, Created) 30-MAY-2000 (Rel. 39, Last sequence update) 30-MAY-2000 (Rel. 47, Last annotation update) 400-MAY-2005 (Rel. 47, Last annotation update) 50-MAY-2005 (Rel. 47, Last) 60-MAY-2005 (Rel	72.50.31459; 1cle exocytosis."; -8674(00)81736-5; couple synaptic	94.773-782(1998). Furdive function in synaptic vesicle exocytosis by binding to Putative function in synaptic vesicle exocytotic machinery. May modulate processing of the betavesicle exocytotic machinery. May modulate processing of the betavesicle exocytotic machinery. May modulate processing of the betavention precursor protein (APP) and hence formation of beta-AAP. SUBUNIT: Part of a multimeric complex containing Munci8-1 and syntaxin-1. Also part of the brain-specific heterotrimeric complex LIN-10/X11-alpha, LIN-2/CASK, and LIN7. Binds to the cytoplasmic LIN-10/X11-alpha, LIN-2/CASK, and LIN7. Binds to the cytoplasmic hippocampus, olfactory system, piriform and enthorinal cortex, hippocampus, olfactory system, piriform and enthorinal cortex, hippocampus, olfactory system, piriform and enthorinal cortex, other mesencephalic areas. LIN-2/CASK, a middle phosphotyrosine-binding domain (PID/PTB) that mediates binding with the cytoplasmic domain of the beta-amyloid precursor protein, and two C-terminal PDZ domains thought to attach proteins to the plasma membrane (By similarity). SIMILARITY: Contains 1 PID domain.	Swiss-Prot entry is copyright. It is produced through a collaboration the Swiss Institute of Bioinformatics and the EMBL outstatic Suropean Bioinformatics Institute. There are no restrictions on

                                                                                                                                                                                                                                                                                                                                                                                    -1- SUBCELLULAR LOCATION: Secreted.
-1- PTM: Two different processing pathways probably exist in antral G-cells. In the dominant pathway progastrin is cleaved at three sites resulting in two major bloactive gastrins, gastrin-34 and gastrin-17. In the putative alternative pathway, progastrin may be processed only at the most C-terminal dibasic site resulting in the synthesis of gastrin-71.
                                                                                                                                                                                                                                                                      gastrin-6 in humans.",
Am. J. Physiol. 279:G909(2000).
-!- Physiol. 279:G909-G909(2000).
-!- PUNCTION: Gastrin stimulates the stomach mucosa to produce and
secrete hydrochloric acid and the pancreas to secrete its
digestive enzymes. It also stimulates smooth muscle contraction
and increases blood circulation and water secretion in the stomach
and intestine.
                                                                                                                                                                                                    PROCESSING, AND SULFATION OF TYR-87.

"Synthesis of gastrin.";
"Synthesis of gastrin.";
Nature 204:933-34(1964)
-!- FUNCTION: Gastrin stimulates the stomach mucosa to produce and secrete hydrochloric acid and the pancreas to secrete its disestive enzymes. It also stimulates smooth muscle contraction and increases blood circulation and water secretion in the stomach and intestine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Agarwal K.L., Noyes B.E.; "Studies on gastrin mRNA structure using an oligonucleotide probe."; Ann. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                           (without alignments)

Sequence 422, Application US/09623548A

Patent No. 684974

GENERAL INFORMATION:
APPLICANT: Conjuchem, Inc.
APPLICANT: Exrin, Alan
APPLICANT: Holmes, Darren
APPLICANT: Thibaudeau, Karen
TITLE OF INVENTION: PROTECTION OF ENDOGENOUS THERAPEUTIC PEPTIDES FROM
TITLE OF INVENTION: COMPONENTS
CURRENT APPLICATION NUMBER: US/09/623,548A

CURRENT FILING DATE: 2000-09-05
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  OTHER INFORMATION: Description of Artificial Sequence:Designed OTHER INFORMATION: peptide to act as kinase substrate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  APPLICANT: Inglese, James

Sequence 74, Application US/08488351A

Sequence 74, Application US/08488351A

Patent No. 584346

GENERAL INFORMATION:
APPLICANT: Ladd, Anna
APPLICANT: Ladd, Anna
APPLICANT: Zamb, Timothy
TITLE OF INVENTION: Immunogenic LHRH peptide constructs
TITLE OF INVENTION: and synthetic universal immune stimulators for vaccines
NUMBER OF SEQUENCES: 114

CORRESPONDENCE ADDRESS:
ADDRESSEE: Maria C.H. Lin
STREET: A5 Park Avenue

CITY: New York
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                .

                                                                                                                                                                                                                                                                                                                       셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 74, Application US/08446692

Patent No. 575851

GENERAL INFORMATION:
APPLICANT: Ladd, Anna
TITLE OF INVENTION: and synthetic universal immune stimulators for vaccines
NUMBER OF SEQUENCES:
ADDRESSEE: Maria C.H. Lin
STREET: 345 Park Avenue
CITT: New York
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
